Undertake a non-linguistic task.

Problem one: definition of student success in language learning: should we consider language learning for other goals.

Language testing and methods of assessment standardise for incentives, effort, and other skills that determine performance on the task in measuring any skill, yet this is rarely done in conducting skill assessments. Standard measures of cognitive skill have been shown to be sensitive to incentives and levels of other skills. Test scores for young children can be

About Skills Tests. Skills assessments measure proficiency in areas like general job readiness skills, verbal and math comprehension, typing and data entry, basic computer literacy, and Microsoft Office. They are designed to determine whether or not an individual has the requisite level of skill required to effectively perform at a job that will require the frequent use of the skills in question.
